From the 1.0 calibration to Double Heston 2.0: one fix at a time (NIFTY, 118 sampled test days, mean with 95% bootstrap interval)

Blue/orange bar: improvement over the previous step; red bar: the step made the error larger. The signed number under each label is the change in vol points.
Step 6 changes only the next-day forecast, so its same-day value equals step 5.
