
Design on 52 development days (exact calibration: 6.6 s per day, off the right edge). Numbers = polish budget in evaluations
plain: polish the surrogate's own best candidates
re-rank the 8 survivors by exact cost first
re-rank + 2 rounds of defect correction
1 candidate polished
2 candidates polished
3 candidates polished
chosen (frozen)
mean log(cost / exact cost); 0 = as good as exact
mean wall time per development day (s)
